

# MOSQUITO CONTROL OF IOWA

## Back Yard Mosquito control

How many times in the summer have you wanted BBQ or just spend time with the family and friends in your yard and have the plans **devastated by mosquitoes????**

We use the state of the art equipment and application methods to help you reclaim your yard. The ATV mounted high pressure system and backpack blower units allows us to penetrate and cover the vegetation. These systems produce the abdomen size droplets and deposits them on both the top and bottom side of the vegetation allowing it to withstand weather better and covers the area where mosquitoes will most likely rest. The mosquitoes will be eliminated when they come in contact with the chemical.

We are state licensed and insured professionals with over 30 years experience in mosquito control. The chemicals are EPA approved and safe for use around people and pets. Your yard will be ready to use in as little as 30 minutes after treatment.

The program for residential costumers consist of regular residual treatments during the season to reduce the mosquito populations.
